
The Litigation Intelligence *Buyer* *Guide*

You read the verdicts. This is the playbook for not becoming one. Twelve pages for legal departments and carriers evaluating the category.

|

Your claims system manages workflow.

Nobody manages outcomes.

Litigation costs rise. Nuclear verdicts spike. Defense spend compounds year over year. The tools most legal departments and carriers run were built for process tracking, not for intelligence that drives decisions. That gap now has a category name. This guide defines the category, names the five capabilities that separate a dashboard from a decision tool, and gives you ten questions to ask any vendor before a pilot.

THE DEFINITION

Litigation Intelligence

Legal control, not just visibility.

Portfolio analytics and AI-native tools that show you exactly what is happening across your cases, your firms, and your jurisdictions. Before the verdict. Not after it.

WHAT A CREDIBLE DEPLOYMENT TARGETS

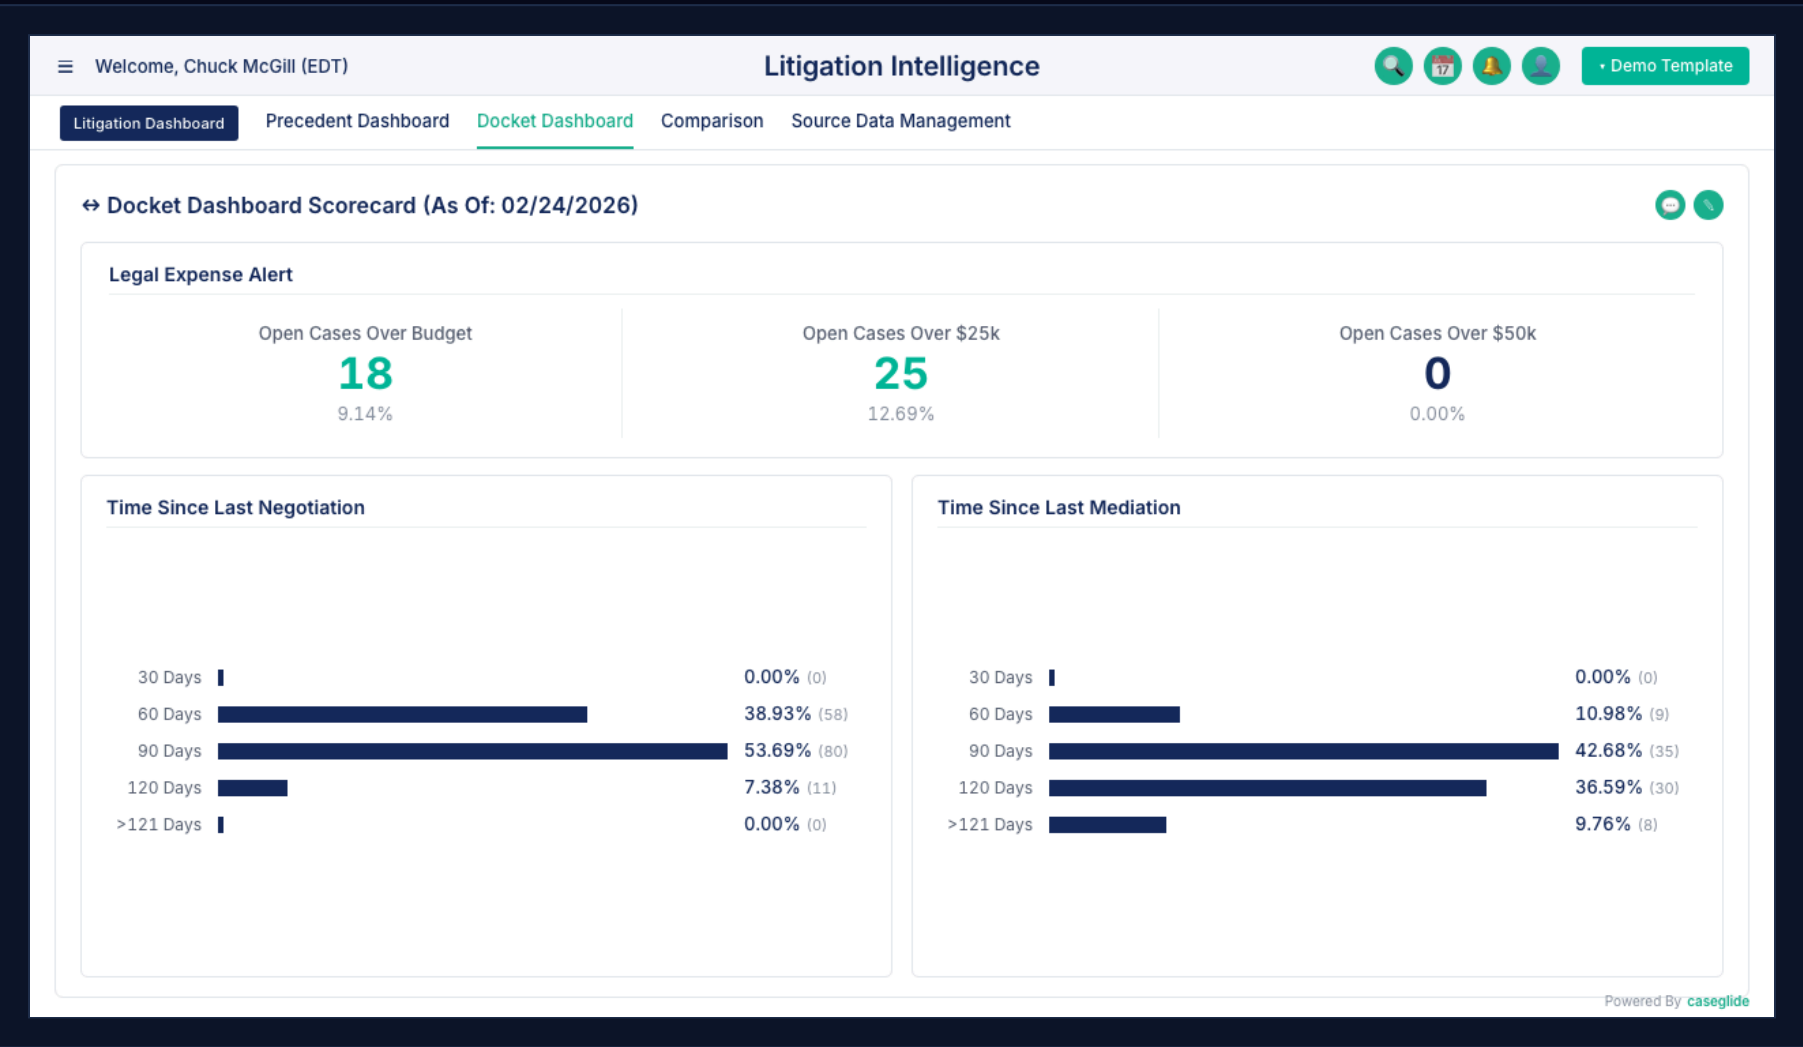

Targeted Defense Spend Reduction

Targeted Settlement Reduction

Targeted Litigation Volume Drop

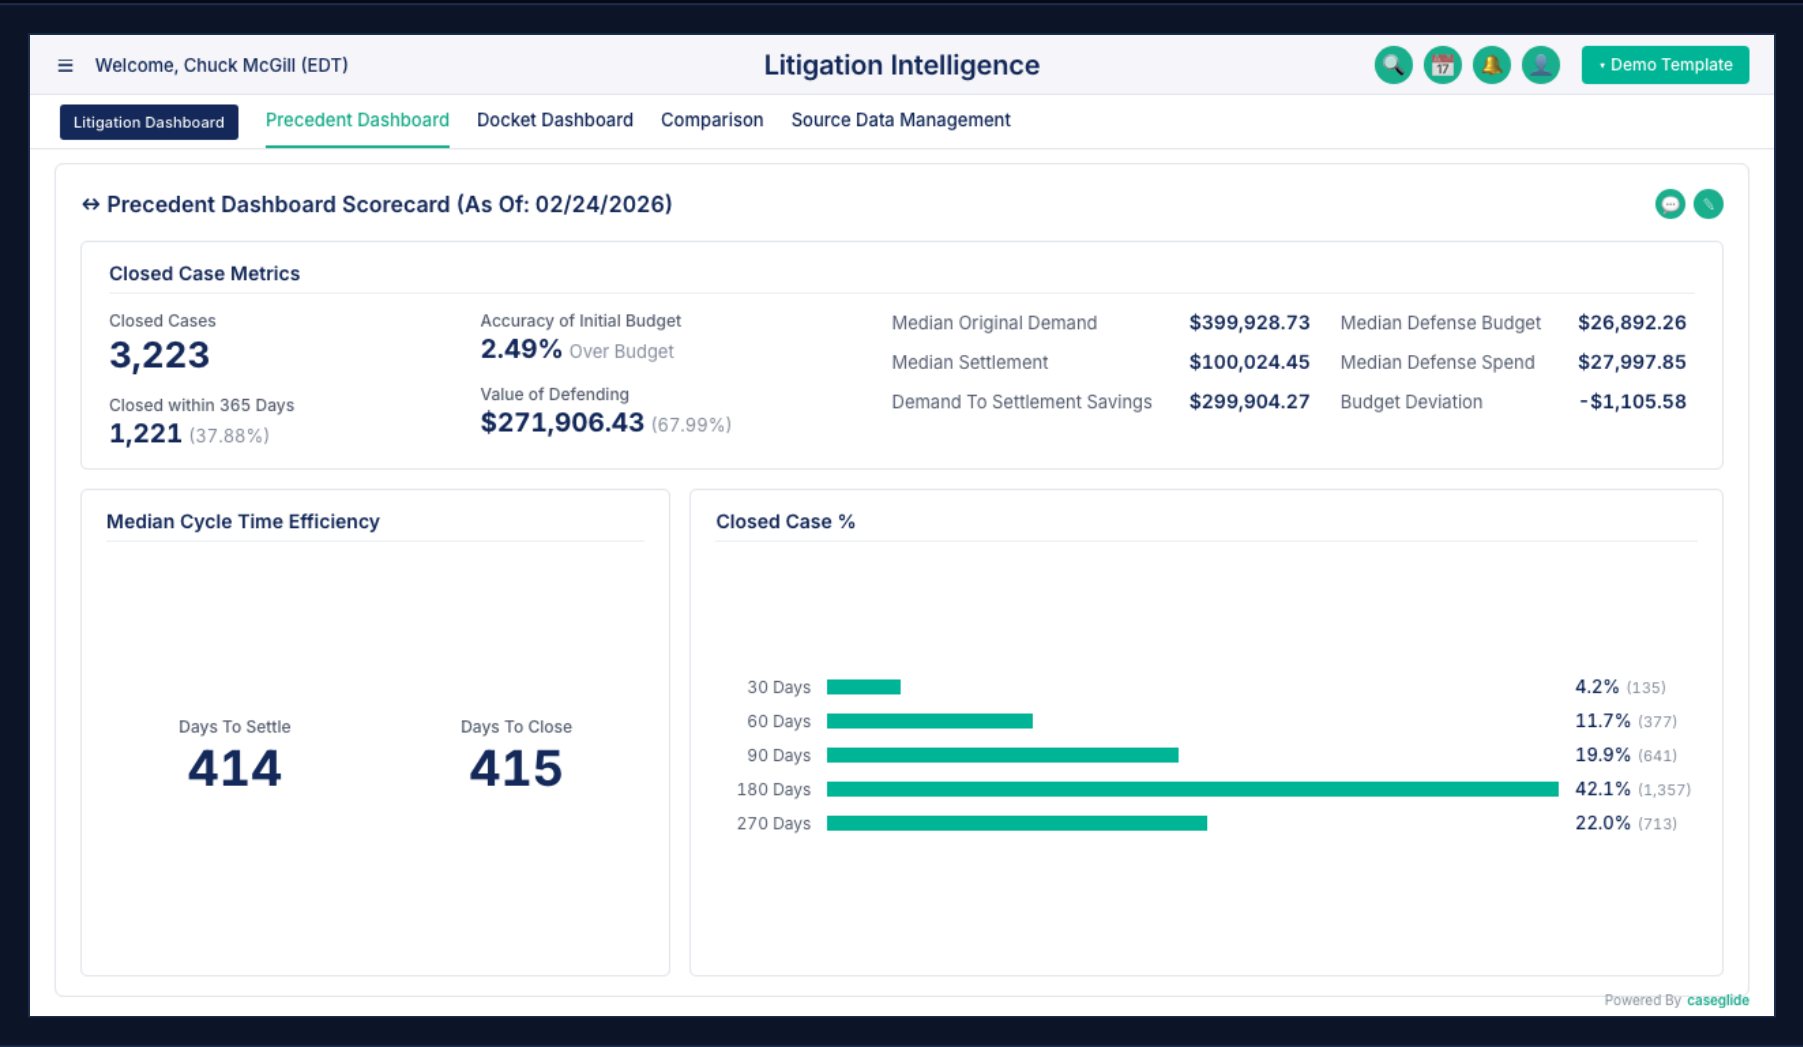

Live Portfolio Command

Every open case that needs attention, surfaced before it is too late.

Closed-Case Precedent

Know whether you got value. Hire the right firms next time.

COUNSEL PERFORMANCE SCORING

Outcome rates by firm, case type, and jurisdiction. Know which attorneys get results.

NEGOTIATION PATTERN ANALYSIS

Which strategies produced the best demand-to-settlement ratios. Repeat them.

Portfolio Question and Answer

Ask the portfolio a question. Get a grounded answer in seconds.

I'm preparing for a reserve roundtable and need a quick large loss assessment. Review the attorneys' evaluations in this case for comparable verdict results. Plaintiff presented well at her 02/14 deposition. The insured McDonald's manager has a 02/20 deposition scheduled, and deposition prep revealed he will be a hostile witness — forced to offer up the liability-losing fact that there have been approximately 500 past similar events. As noted in the adjusters' and attorneys' recent updates, McDonald's should not pass up the opportunity to resolve this case at the standing \$250,000 demand from plaintiff's counsel Goodman.

02/18/2026 · 11:15 AM

Comparable Verdict Results: Liebeck v. McDonald's (Claim 0123-LMC-2026-001)

Overview:

Pulling four nuclear-verdict outcomes that match the case posture — failure-to-warn product liability with hostile or weak corporate-witness testimony on internal hazard knowledge.

Comparable Verdicts:

• Pilliod v. Monsanto Co. (Alameda Co. Sup. Ct., CA, May 2019): \$2.055B verdict, reduced on appeal to ~\$87M. Roundup / non-Hodgkin lymphoma — corporate witness eviscerated on internal safety reviews.

• Ingham v. Johnson & Johnson (22nd Jud. Cir., St. Louis, MO, July 2018): \$4.69B verdict, affirmed in part on appeal at ~\$2.1B. Talc / asbestos / ovarian cancer (22 plaintiffs) — defense witness collapsed on internal asbestos-testing record.

• Hardeman v. Monsanto Co. (N.D. Cal., March 2019): \$80.27M verdict, reduced on appeal to ~\$25M. Roundup / NHL — federal precedent that the failure-to-warn theory survives Daubert with a hostile corporate witness.

• Robinson v. R.J. Reynolds Tobacco Co. (Escambia Co. Cir. Ct., FL, July 2014): \$23.6B verdict, reduced on remittitur to ~\$16.9M. Engle progeny tobacco failure-to-warn — corporate-knowledge documents drove a record single-plaintiff punitive verdict.

Assessment:

Comparable failure-to-warn verdicts with hostile corporate-witness testimony cluster well above the \$1.6M ceiling in McGill's 02/17 memo. Even after appellate reduction, post-judgment values land in the high-eight to ten-figure range. Goodman's \$250,000 demand sits roughly an order of magnitude below credible downside protection. The comp pattern supports the adjusters' and defense-counsel position: acceptance prior to the 02/20 manager deposition is the downside-protected path before the 500-prior-complaints fact enters the record.

02/18/2026
11:30 AM

Claims supervisor reviewed file with adjuster and queried **Chambers AI** for comparable food-service nuclear-verdict outcomes. Comps validated multi-million jury risk on materially weaker Manager-credibility facts. Supervisor authorized **acceptance of Goodman's \$250,000 offer** before the 02/20 deposition to avoid nuclear verdict.

02/17/2026
9:15 AM

Manager preparation session surfaced material credibility risk — dismissive tone toward prior burn complaints, weak recall of corporate temperature protocols. Defense calculus reversed. Manager deposition is scheduled in three days (**02/20/2026**). McGill flagged nuclear-verdict trajectory if Manager testimony reaches the jury and escalated to carrier supervisor.

02/14/2026
4:45 PM

Plaintiff's counsel *Saul Goodman* conveyed pre-litigation settlement demand of **\$250,000** later the same day. McGill assessed the demand against the deposition record and recommended **rejection** — defenses on comparative fault and failure-to-warn expected to be strong. Carrier authorized continued defense posture; Manager deposition to proceed.

02/14/2026
10:30 AM

Plaintiff's deposition completed. Treating-physician testimony confirmed burn severity, but Plaintiff's own admissions on product handling and prior coffee consumption surfaced viable comparative-fault facts. Failure-to-warn theory weakened on cross. Initial defense assessment: case is defensible at trial; reserves held within standard band.

WHAT THE FIVE CAPABILITIES STAND ON

The data spine *comes first.*

Every closed case in your claims system is a data point. Every law firm bill is a data point. Every plaintiff attorney who has sued you is a data point. Structured together, they answer the questions your team spends hours answering manually. A vendor without a plan for structuring your case data is selling dashboards over a void.

CASE FACTS

Stage, venue, claim type, exposure,
reserve history

COUNSEL ACTIVITY

Spend, staffing, cycle time, outcome
rates by firm

NEGOTIATION HISTORY

Demands, offers, mediation posture,
settlement leverage

Ask how the spine gets built before you ask what the screens look like.

Ten questions to ask *any vendor*.

Before a pilot, not after. A serious vendor answers all ten without a follow-up meeting.

01 Which claim systems have you integrated with, and how? Guidewire ClaimCenter, Duck Creek, Majesco, Salesforce FSC, homegrown.	02 Does the integration read case data only, or can it create matters and update the claim system in both directions?
03 What does my IT team build, what do you build, and who owns each item after launch?	04 Can we start from data extracts before any API work, and how fast do the dashboards populate?
05 Where does the AI get its answers, and what stops it from inventing facts about my cases?	06 How do you score outside counsel performance, and can I see the math behind the score?
07 What does security review look like: hosting, credentials, tenant isolation, and who can see my data?	08 Is there a sandbox, and what do field mapping and validation cost in my team's hours?
09 What outcomes do your live clients measure, and what should we target in year one?	10 What happens at renewal or exit: does my structured case history leave with me?

Build it yourself, *or buy it?*

BUILD, HONESTLY

A strong BI team can stand up a litigation dashboard in a quarter. What it cannot buy off the shelf is the litigation-specific data structuring, the counsel performance model, and AI answers grounded in case records. Those get rebuilt from scratch, and maintained from scratch.

BUY, HONESTLY

A category vendor amortizes that work across every client. The price is vendor dependence, which is why questions 7 and 10 on the previous page exist. A vendor who hesitates on data portability has answered question 10 for you.

The right answer is the one your team is still running in 18 months. Most legal departments have the BI talent for one dashboard, not for a litigation data spine that must survive staff turnover, firm turnover, and a claims system migration.

No ads. No paywall. *Here is the arrangement.*

My name is Wes Todd and I run CaseGlide. We build litigation management software for large legal departments and insurance carriers. Sentinel exists because the verdicts we cover are the same ones our clients work to see coming.

This guide was written by the team behind Litigation Sentinel. The product views shown are CaseGlide's own, and the buying questions apply to every vendor in the category, including us.
